

What's New for 2017...

In our continuous battle to provide the **NUMBER 1** Laser cutting service, SSC Laser have been making a number of adjustments within the business. The most recent addition to our business is the all **NEW Adige LT8.10 machine**, boasting a whole range of improved functionalities from increased capacity, new operating software through to a scheduled material handling process.

Below are some of the **NEW** features;

- The **NEW weight per metre** limit now stands at a **massive 40kgs**. Allowing us to work with those large, heavy and difficult to handle components that most people will turn down.
- The **NEW active focus** feature allows us to improve the speed and quality of the cutting process, generating an efficient but high quality result every time.
- The **NEW active pierce** feature works in conjunction with the active focus and will increase our cutting speeds with a single pierce taking as little as 0.7 seconds in some cases (material dependent).
- The **NEW active scanner** creates a 3D image of the tube which is then compared to a perfectly dimensioned section, making the necessary compensations to take into account any defects. This will allow us to almost guarantee that your products are of the highest accuracy and precision.
- With the all **NEW** and increased size range we can also cater for circular sections up to 240mm in diameter. Expanding our current capabilities to provide better solutions for you and your customers.
- We also now have the ability to produce components from a range of **Universal Beam** sections, opening a new door into the construction and steel fabrication industry.

So how will this benefit our Customers?

We are always trying to find new ways to set us apart from other's within the industry. The NEW LT8.10 package will allow us to;

- Provide improved lead times
- Maintain high accuracy
- Provide continuous reliability
- Open up the market to new possibilities

All of these factors and more are what keeps us at the cutting edge of laser technology, providing a second to none service for all.
